

RECYCLA

From industrial waste
comes a regenerative energy

 **RECYCLA**
Società del Gruppo Herambiente

THE ITALIAN LEADER IN INDUSTRIAL WASTE MANAGEMENT

Recycla is a subsidiary of Herambiente Servizi Industriali, a company of the Herambiente Group, national leader in the treatment and recovery of waste and the top Italian company in the management of waste from production activities.

Recycla's know-how is therefore complemented by the experience of a huge Group, which provides the largest waste treatment and recovery facility in the country, with around 100 plants that deal with all waste

types, and covers the entire country with its services and sales network. With our wide range of technologically advanced and evolving solutions, we work with our customers to maximise recovery and recycling, with a view to the circular economy and the development of sustainable business processes. Supported by the expertise of Herambiente, a pioneer in cutting-edge technologies, we turn waste into a resource, for the recovery of materials and energy.

RECYCLA IS ALREADY AT THE SIDE OF MORE THAN 700 CUSTOMERS, ACTIVE IN A WIDE VARIETY OF SECTORS:

FOOTWEAR

PHARMACEUTICAL
PRODUCTS

Resana (Treviso) - storage and treatment of special waste (hazardous and non-hazardous solids and sludge); sorting for the materials recovery and compaction.

Maniago (Pordenone) - laboratories, waste storage, plant for production of alternative fuel, plant for sorting and shredding contaminated packaging.

CUSTOMISED SOLUTIONS

For over 20 years, we have been working alongside manufacturing companies and artisan businesses to ensure comprehensive, efficient and innovative waste management. Thanks to positioning across the territory and the huge receptive capacity of our plants, we are able to **guarantee the management of waste to companies in Northern and Central**

Italy (Emilia-Romagna, Friuli-Venezia Giulia, Lombardy, Marche, Trentino-Alto Adige and Veneto). Backed by experience gained with more than 1 million tonnes of industrial waste collected and processed each year by HASI, we offer **customised service packages** for an increasingly integrated management of the entire cycle of waste produced in the company.

CUSTOMISED OFFERS

ECOSTART

Collection, transport and treatment of major waste and production waste generated by small and medium-sized businesses.

ECOL360°

This turnkey package is personalised for the customer, freeing them from handling their own waste while ensuring significant sustainability performance, which is properly monitored and certified.

ECOTEX360°

The rental of washable and reusable technical cloths, which can be used for industrial cleaning, maintenance and degreasing of equipment and mechanical parts. The collection, washing and return of clean cloths is also included in the package.

A NEW PLANT THAT RECOVERS CONTAMINATED PACKAGING

To increase the spectrum of regenerable materials at the service of companies, the latest addition to Recycla is a plant for removing hazardous material and/or contaminating substances such as paints, glues, adhesives and powders from industrial packaging, which are thus revalorised to find new life in the recycling chain.

WITH ECOL360° YOUR WASTE IS OUR PRIORITY

With ECOL360°, we offer a service that guarantees complete waste management of your company, providing a short and guaranteed supply chain: we take on complete responsibility for the process, relieving you of the duty of **filling in the MUD waste register** and all other paperwork. You can **track every stage of the management process** because it all takes place within our facilities, and you have the security of receiving a **certified service** in line with the principles of the circular economy.

GUARANTEE OF A SHORT AND CERTIFIED SUPPLY CHAIN

- single interlocutor;
- certified service;
- technological innovation in the revalorisation of waste;
- waste management customised according to production activity;
- traceability of waste throughout the supply chain;
- bureaucratic simplification with the exclusive ECOL360° portal;
- annual schedule of waste collection;
- service always guaranteed;
- supply of environmentally sustainable packaging;
- solutions for in-house cleaning (ECOTEX360°).

ECOL360° ALSO INCLUDES A DEDICATED TRAINING SERVICE FOR CUSTOMERS

PEOPLE360° is the integrated training plan that involves those engaged in the environmental supply chain, to update skills and foster increasingly safe and virtuous behaviour.

A CERTIFIED SERVICE FOR YOUR COMPANY

The acquired certifications guarantee **an excellent quality level** of all our facilities and company activities, testifying to a constant commitment to the preservation of resources, energy saving, risk control, and the development of new technologies for the **prevention and reduction of environmental impact, both direct and indirect**. And there's more. We have also chosen to

share this quality model with our customers, **applying the ISO 14001 Environmental Certification to the provision of our services** and allowing them access to all the benefits: the guarantee of a systematic approach to environmental sustainability also includes waste reduction and constant monitoring of environmental performance indicators.

SUSTAINABILITY REPORTING

Through the drafting of a proper sustainability report, Recycla **informs its customers about the environmental results of their performance** attributable to optimised waste management in terms of circularity and energy transition.

NEW ENERGY FROM NON-RECYCLABLE WASTE

Responsible behaviour guides Recycla's actions. We believe in designing a more sustainable future together with our customers and, in order to do so, we have developed, according to the principles of the circular economy, **an exclusive full management system for revalorisation of non-recyclable solid and liquid waste**, which is transformed into alternative fuel.

NON-RECYCLABLE PRODUCTION WASTE IS REFINED AND TRANSFORMED INTO A HIGH-CALORIFIC ALTERNATIVE FUEL PRODUCT FOR ENERGY-INTENSIVE PROCESSES IN HARD-TO-ABATE INDUSTRIES.

The collected waste reaches our storage, treatment and sorting sites.

The non-recyclable part is refined and processed into alternative fuel at the Maniago (Pordenone) plant. Alternative fuel is a substitute for traditional fuels (for example fossil) in the production of heat and electricity. Its environmental impact is in fact lower, making it particularly attractive for use in energy-intensive industries. Alternative fuel can be either solid or liquid.

→ **Liquid fuels**, produced from liquid or semi-liquid waste, are manufactured according to the technical specifications of plants requiring high-performance fuels.

→ **Solid fuels** are produced with different characteristics according to the specifications and requirements of the end-user. In particular, they are made for use in cement plants, in the various stages of the thermal cement production process (main burner and calciner).

AN ANSWER TO EVERY NEED

With Recycla, you have a single point of contact assisting you with all waste management processes, optimising resources both within your company and during waste treatment in our plants, while also being able to count on the wide range of possibilities and value-added services offered by Herambiente Servizi Industriali. We provide **consultancy, management support, laboratory analysis and assistance** throughout the entire process, offering a

fully-certified supply chain. Thanks to our know-how and plant facilities of Herambiente, any type of solid or liquid waste, hazardous or non-hazardous, can be sorted for recycling and recovery.

The Recycla Approach surpasses the traditional waste collection, transport and disposal service, with a consultancy-style method complete with dedicated business consultants and technical assistants for each customer.
